

Warm-Up

Take out your homework

1. A system of equations is shown below.

$$y = x^2 + 2x + 8$$
$$y = -4x$$

What is the smallest value of y in the solution set of the system?

- A. -4 B. -2 C. 8 D. 16

4. The point $S(x,y) = (-y,x)$. What transformation is S ?

- A. R_{270} B. R_{90} C. $r_{x\text{-axis}}$ D. R_{180}

Triangles are the simplest polygons used in the design of furniture, buildings, and bridges.

Theorem 2-1 The sum of the measures of the angles of a triangle is 180

Triangle Angle-Sum Theorem

$$m\angle A + m\angle B + m\angle C = 180$$

Find the measure of each numbered angle.

Handwritten calculations for the red triangle:

$$\begin{array}{r} 35 \\ + 65 \\ \hline 100 \end{array}$$

$$\begin{array}{r} 180 \\ - 100 \\ \hline 80 \end{array}$$

$$\begin{array}{r} 26 \\ + 36 \\ \hline 62 \end{array}$$

$$\begin{array}{r} 180 \\ - 62 \\ \hline 118 \end{array}$$

Answers: 80 and 118°

Handwritten calculations for the blue triangle:

$$\begin{array}{r} 90 \\ + 58 \\ \hline 148 \end{array}$$

$$\begin{array}{r} 180 \\ - 148 \\ \hline 32 \end{array}$$

Answer: 32°

Find the value of x , y , and z .

$$\begin{array}{r} 39 \\ + 65 \\ \hline 104 \\ 180 \\ - 104 \\ \hline 76 \end{array}$$

$$\begin{array}{r} 125 \\ - 125 \\ \hline 0 \end{array}$$

$$\begin{array}{r} 180 \\ - 76 \\ \hline 104 \\ 104 \\ - 104 \\ \hline 0 \end{array}$$

$$\begin{array}{r} 180 \\ - 115 \\ \hline 65 \end{array}$$

Use the Triangle-Sum Theorem

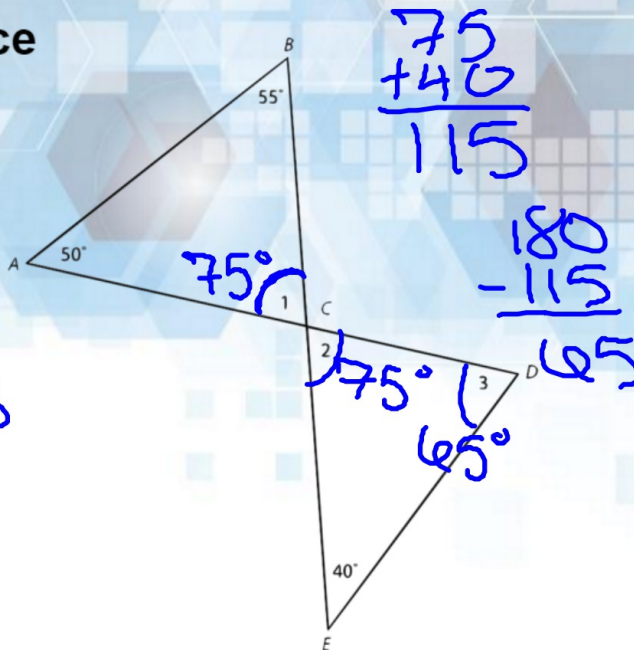

Guided Practice

Example 2

Find the missing angle measures.

$$\begin{array}{r} 55 \\ + 50 \\ \hline 105 \end{array}$$

$$\begin{array}{r} 180 \\ - 105 \\ \hline 75 \end{array}$$

Exterior Angles of a Triangle

an angle formed by a side and an extension of a side

Remote Interior Angles

the two non-adjacent interior angles for each exterior angle

Theorem 2-2

Exterior Angle
Theorem

The measure of each angle exterior angle of a triangle equals the sum of the measures of its two remote interior angles.

$$m \angle 1 = m \angle 2 + m \angle 3$$

Find the measure of each numbered exterior angle.

70°

113°

90°

Triangle Classification

Equilateral

All sides have the same length.

Isosceles

Two sides have the same length.

Scalene

All sides have different lengths.

Acute

All angles are less than 90 degrees.

Obtuse

One angle is greater than 90 degrees.

Right

One angle is 90 degrees.
